

BOTOX Post Treatment Instructions

FOR THE FIRST 4 HOURS AFTER TREATMENT:

- Do not rub treated area
- If you lie down, please keep head elevated with 2 to 3 pillows
- Do not bend over to pick up heavy objects. This can increase the blood pressure in your face

Experience suggests that you may have a more lasting effect if the injections are continuous over a period of several years.

We recommend you return as soon as the effect is gone. Initially, this will occur within 3 to 6 months. Over time, we believe fewer injections will be required if the affected area is treated regularly.

- If you do not see a benefit or have any concerns in 10 to 14 days, call us 937-293-9866
